About the Colossal CPT-150

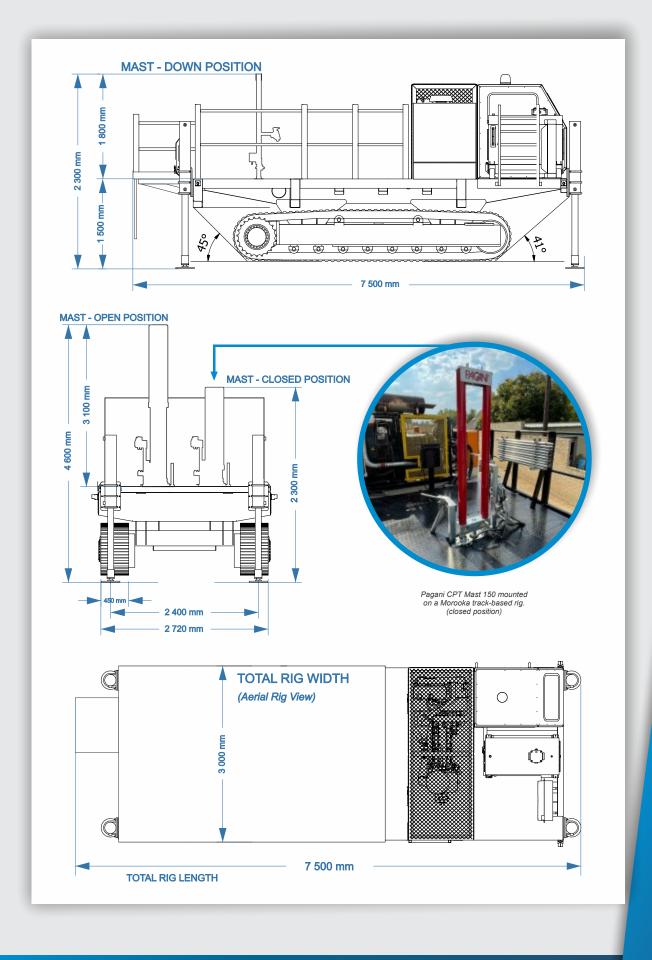

The Colossal CPT-150 is a customized CPTu rig specifically designed with stability in mind. With a Pagani CPT 150 mast fitted to a Morooka track-based carrier, the rig is ideal for conducting CPTu tests where the ground conditions show characteristics of a lower shear strength value or cohesiveness. The track-base allows for easy manoeuvring between test locations that are closer in distance while removing the need for additional towing vehicles on-site.

Another benefit to this customisation is that the rig acts as a counterweight that prevents the rig from lifting mid-test and provides the reaction force needed to offset the 190kN of thrust applied while advancing the CPTu probe and rods at a constant 2cm per second.

TECHNICAL SPECIFICATION	
Maximum Thrust Force	19 Ton / 190 kN
Maximum Retraction Force	18 Ton / 180 kN
Operating System Pressures	250 bar / 25Mpa
Combined Rig Weight	16 Tons
